Professional Summary

Final-year Software Engineering student specializing in Frontend Development (React, TypeScript, Vite, Tailwind CSS). Experienced in building highly responsive web interfaces, designing reusable UI components, and managing client-side application states. Passionate about modern UI/UX workflows, web accessibility, and client-side performance optimization.

Technical Skills

- Languages:** JavaScript, TypeScript, HTML, CSS, Java
- Frontend Engineering:** React, Vite, Tailwind CSS, React Router, Framer Motion, Chart.js
- Real-time & Media UI:** Socket.IO Client, WebSockets, LiveKit Client SDK
- Backend Integration:** RESTful APIs Consumption, JSON Web Tokens (JWT), Google OAuth2 Flows
- Tools & Workflow:** Git, GitHub, Docker (Basics), GitHub Actions (CI/CD Awareness)

Education

Industrial University of Ho Chi Minh City (IUH)
Software Engineering — Faculty of Information Technology

2022–Present
GPA: 3.12 / 4.0

Awards

Academic Encouragement Scholarship
Industrial University of Ho Chi Minh City (IUH) — Excellent Academic Performance

2023–2024

Projects

- Shop Perfume — Full-stack E-commerce Platform**
React 19, TypeScript, Vite, Tailwind CSS, React Router, Framer Motion, Chart.js
Links: [GitHub Source](#) — [Live Demo](#)

 - Engineered a responsive customer storefront and an interactive administrative analytics dashboard using React 19.
 - Programmed client consumer flows for categorical catalogs, active cart counters, and multi-stage checkouts.
 - Formulated client state architectures to safely preserve stateless JWT tokens and handle Google OAuth2 redirections.
 - Architected high-fidelity analytical dashboards with Chart.js for line, bar, and pie turnover graphics.
 - Built custom frontend drivers to parse relational metric data arrays into downloadable Excel and PDF sheets.
 - Established routing code-splitting boundaries and lazy-loading paths to minimize initial page bundle latency.

12/2025–05/2026
- Riff — Realtime OTT Chat Platform**
React, TypeScript, Vite, Tailwind CSS, Socket.IO Client, LiveKit Client SDK
Links: [Frontend](#) — [Live Demo](#)

 - Developed the client-side chat interface, replacing traditional monolithic polling with fluid, sub-100ms layouts.
 - Developed modular, dynamic React views for multi-threaded conversation trees, pinned tabs, and live polls.
 - Consumed Socket.IO Client event pipelines to handle real-time message propagation and typing indicators.
 - Integrated LiveKit Client WebRTC SDK to manage real-time voice/video call modals and stream toggles.
 - Styled micro-interactions using Tailwind CSS while maintaining 60 FPS scrolling during socket bursts.
 - Delivered an error-tolerant WebRTC reconnection state modal to gracefully handle network interruptions.

05/2026–06/2026
