Professional Summary

Final-year Software Engineering student specializing in Full-stack Development (React, Spring Boot, Node.js, Microservices). Experienced in building low-latency communication systems, event-driven architectures, and automated CI/CD pipelines. Passionate about building end-to-end web applications from user interfaces to scalable backend services.

Technical Skills

Programming Languages: Java, JavaScript, TypeScript, SQL

Frameworks & Libraries: React, Spring Boot, Spring Security, Spring Data JPA, Node.js, Express.js

Technologies & Protocols: RESTful API, Microservices, WebSockets, WebRTC, JWT, OAuth2

Databases & Caching: Redis, MongoDB, MariaDB, SQL Server

Tools & Cloud Infrastructure: Docker, RabbitMQ, Git, GitHub Actions, AWS (EC2, S3, ECR, SSM)

Education

Industrial University of Ho Chi Minh City (IUH)
Software Engineering — Faculty of Information Technology

2022–Present
GPA: 3.12 / 4.0

Awards

Academic Encouragement Scholarship
Industrial University of Ho Chi Minh City (IUH) — Excellent Academic Performance

2023–2024

Projects

Riff — Realtime OTT Chat Platform
React, Node.js, Spring Boot, MongoDB, Redis, RabbitMQ, Docker, AWS
Links: [Backend](#) — [Frontend](#) — [Live Demo](#)

05/2026–06/2026

- Co-engineered a chat platform utilizing a 7-service microservices architecture to achieve fault isolation.
- Developed a responsive React frontend for conversation trees, live user polls, and message reactions.
- Built the core Chat microservice using Node.js and Socket.IO to enable low-latency communication.
- Integrated AWS S3 storage layer to securely serve multi-format attachments and media files.
- Designed an event-driven flow via RabbitMQ to process background workers and notification dispatches.
- Utilized Redis distributed caching to sync typing indicators and manage active global connections.
- Implemented real-time voice and video calling features integrating LiveKit WebRTC SDK.
- Automated path-dependent container deployment to AWS EC2 via GitHub Actions and AWS SSM.

Shop Perfume — Full-stack E-commerce Platform
React 19, Spring Boot 3, Spring Security, MariaDB, Redis, SePay Webhook
Links: [GitHub Source](#) — [Live Demo](#)

12/2025–05/2026

- Developed an e-commerce infrastructure featuring a public storefront and an admin reporting panel.
- Built backend services for catalog, checkouts, and coupon engines using Spring Boot 3 and MariaDB.
- Configured Spring Security with stateless JWT filters and Google OAuth2 single sign-on.
- Achieved 100% payment verification automation via an API webhook controller with SePay.
- Designed an administrative reporting dashboard with React 19 and Chart.js for revenue metrics.
- Applied Redis memory caching over expensive product queries to prevent database bottlenecks.
- Handled cloud multimedia storage management and processing workflows using Cloudinary SDK.
